LAB MIDTERM

(WEB TECHNOLOGIES)

Submitted to: Sir Usman Akram

Submitted by:
Bilal (FA24-BCS-065)

Submission Date: 29-10-2026

Section: BCS (B)

Bilal — FA24-BCS-065

Task 1

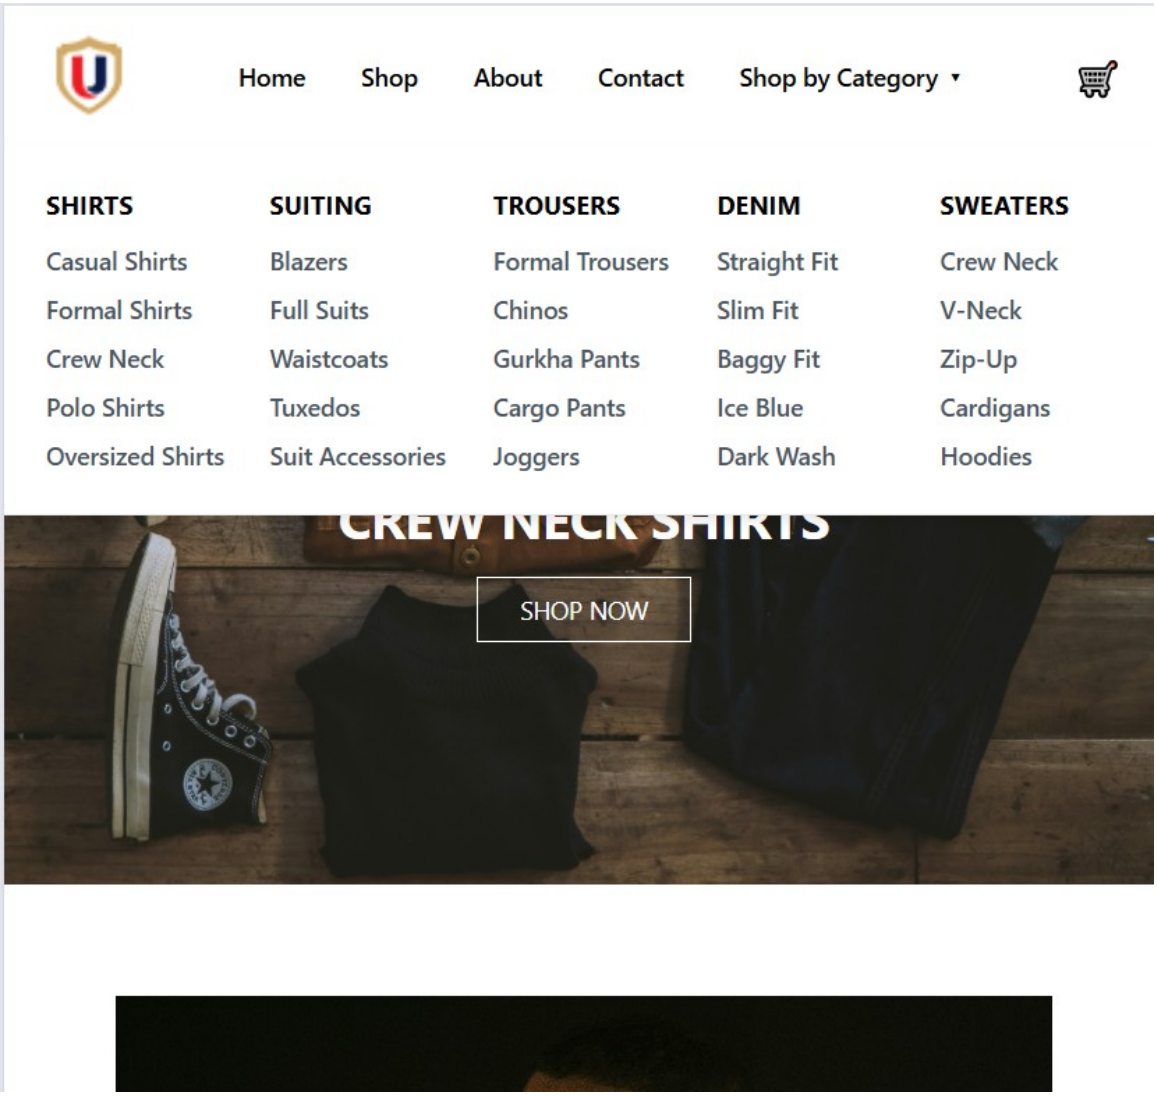

Task 1 — Statement

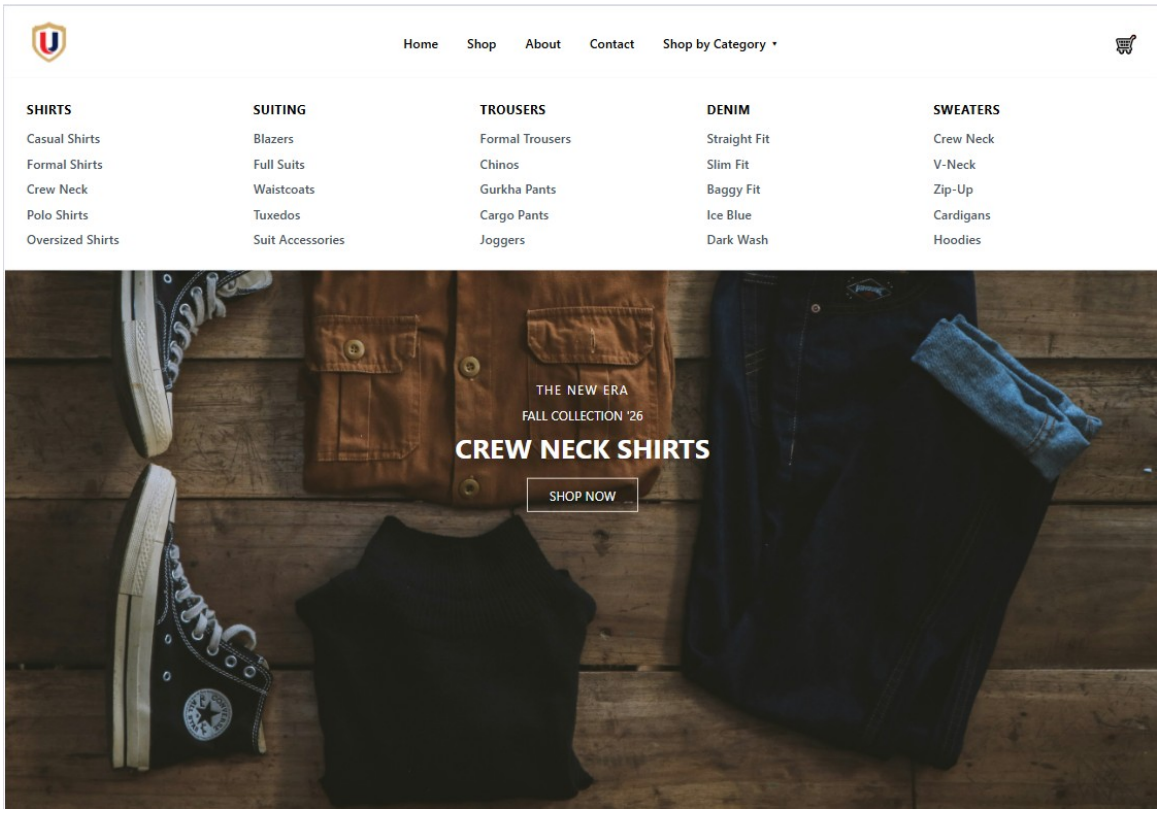

Task 1 — Mega-menu in the Existing Navbar

Add a "Shop by Category" item to the navbar. It must work with no JavaScript.

• From BP and wider: hovering OR keyboard-focusing "Shop by Category" opens a full-width panel under the navbar with columns of links (at least 4 links per column, one heading per column). It must open with Tab alone (use :focus-within), stay open while the pointer moves from the menu item into the panel, and close when focus leaves.
• The open panel must appear above everything on the page, including the product grid, card hover effects and any sticky element, and must not push the page content down.
• Below BP: inside the existing collapsed (hamburger) menu, the same groups become an accordion made with <details> and <summary> (closed by default, each opening independently).
• Semantic markup: links stay inside the <nav>, each column is a list, and the panel has a visible heading per column.

Task 1 — Screenshots

Task 2

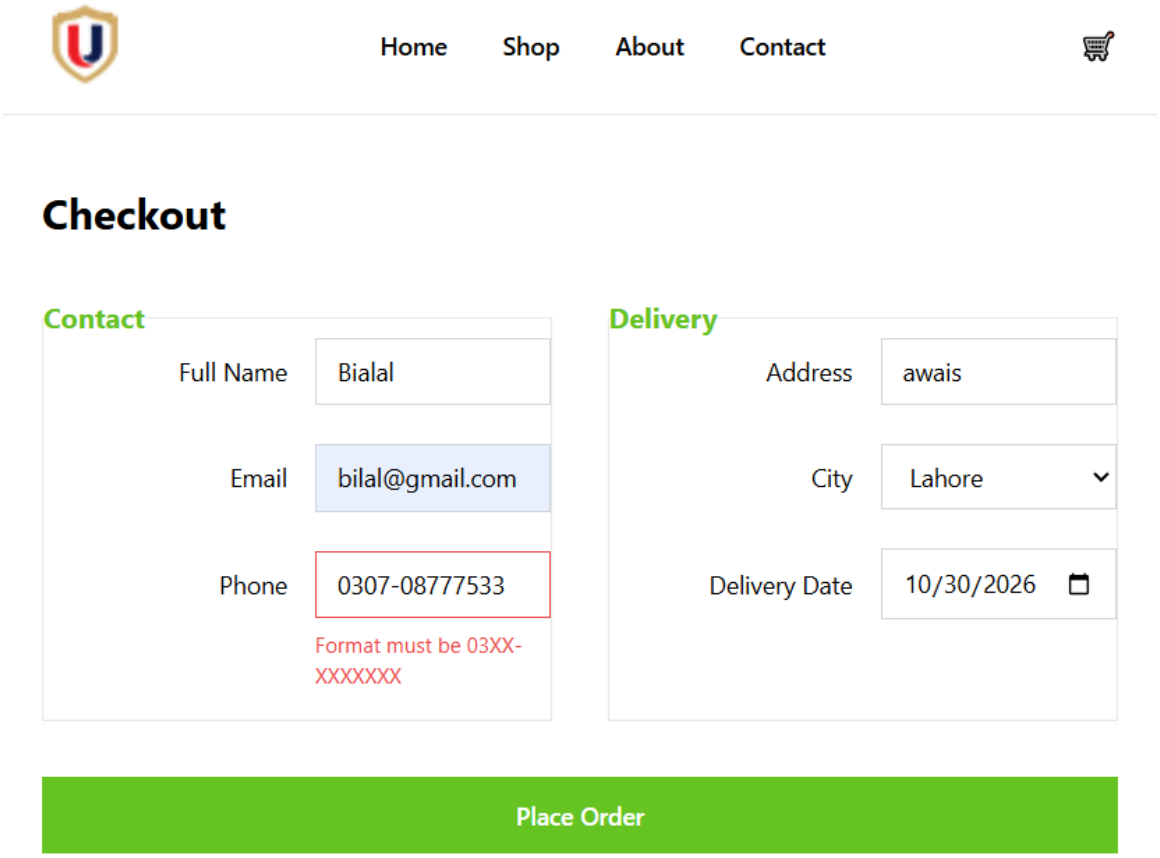

Task 2 — Statement

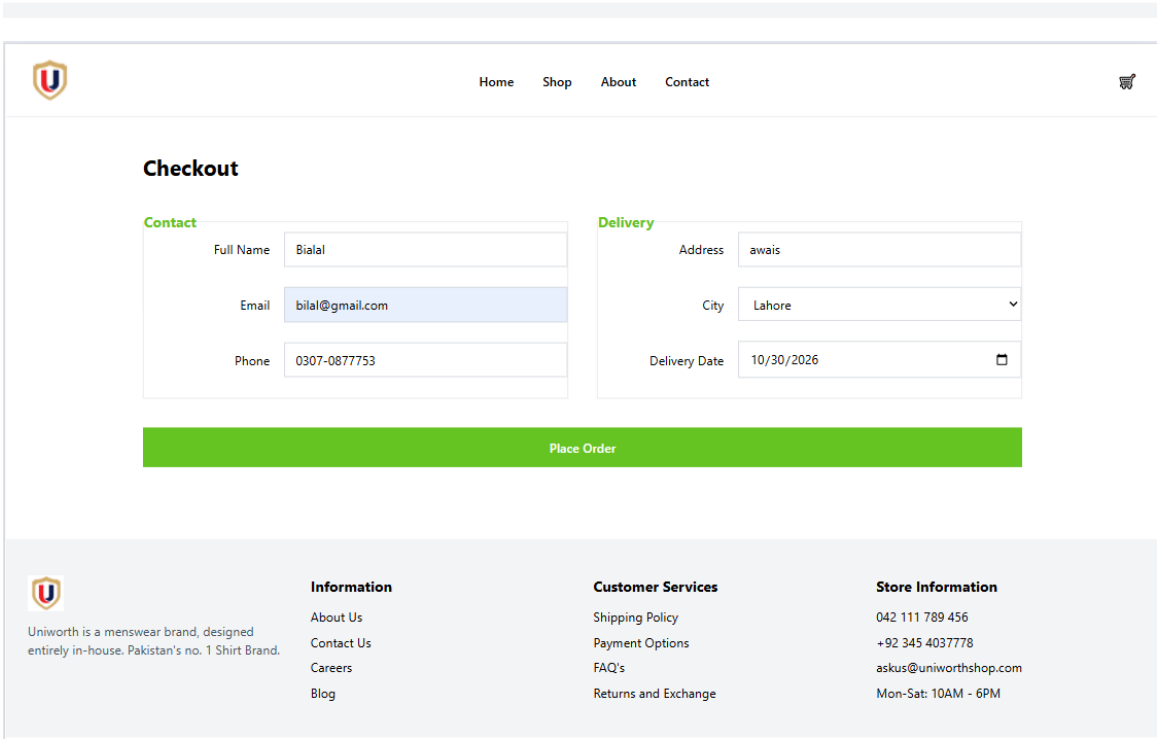

Task 2 — Checkout Form with HTML5 Validation Only

Create midterm/checkout.html linked from the cart icon. Use only HTML5 form features and CSS for validation (no JavaScript).

• Two <fieldset>s with <legend>s: "Contact" (full name, email, phone) and "Delivery" (address, city as a <select>, and a delivery date). Every input has a <label> joined to it with for/id.
• Phone must accept only the format 03XX-XXXXXXX (use the pattern attribute); the delivery date cannot be earlier than the exam date and not more than N days after it (use min and max).
• Invalid fields show a red border and a short message only after the user has interacted with them, not on page load (hint: :user-invalid, or :not(:placeholder-shown) with :invalid).
• From BP and wider the two fieldsets sit side by side, with labels aligned in a column on the left of their inputs (CSS Grid); below BP, one column with labels above inputs. The submit button is full width at every size.

Task 3

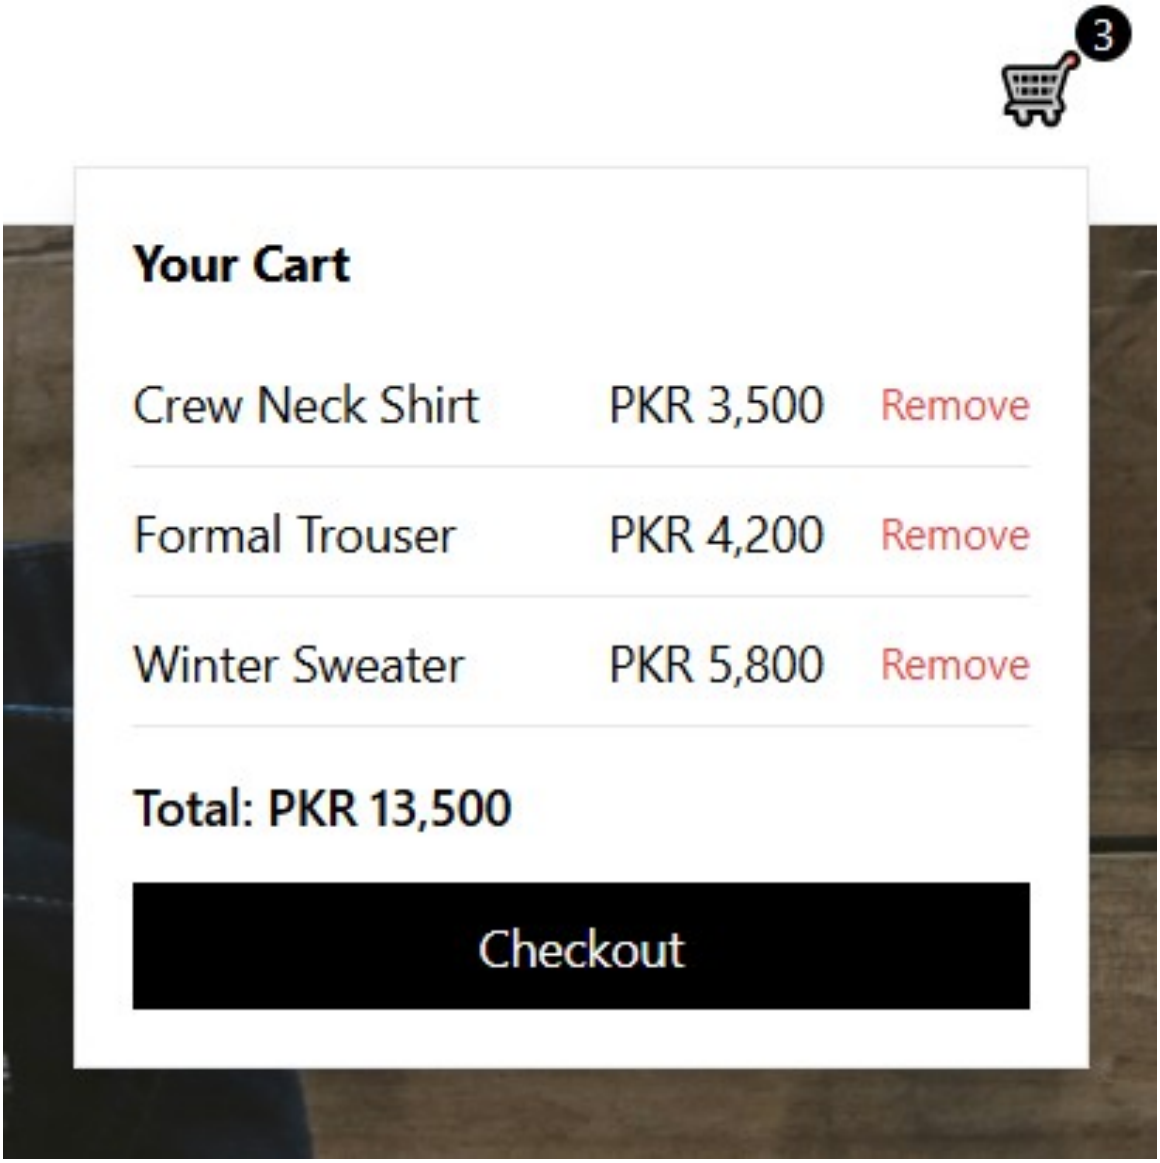

Task 3 — Statement

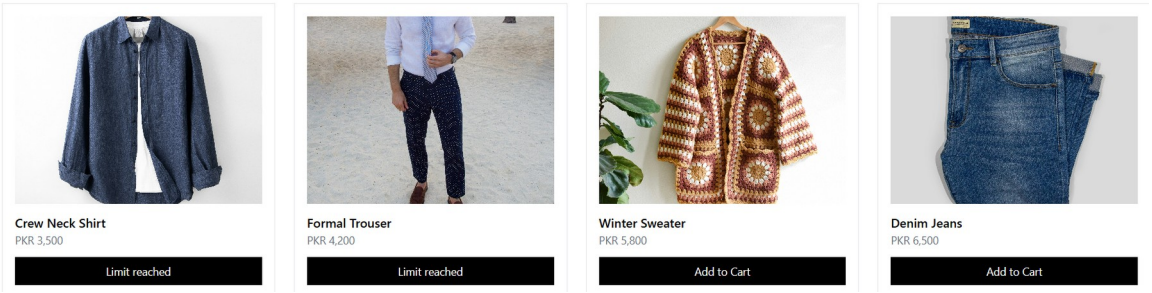

Task 3 — JavaScript: Working Cart Badge and Mini Cart

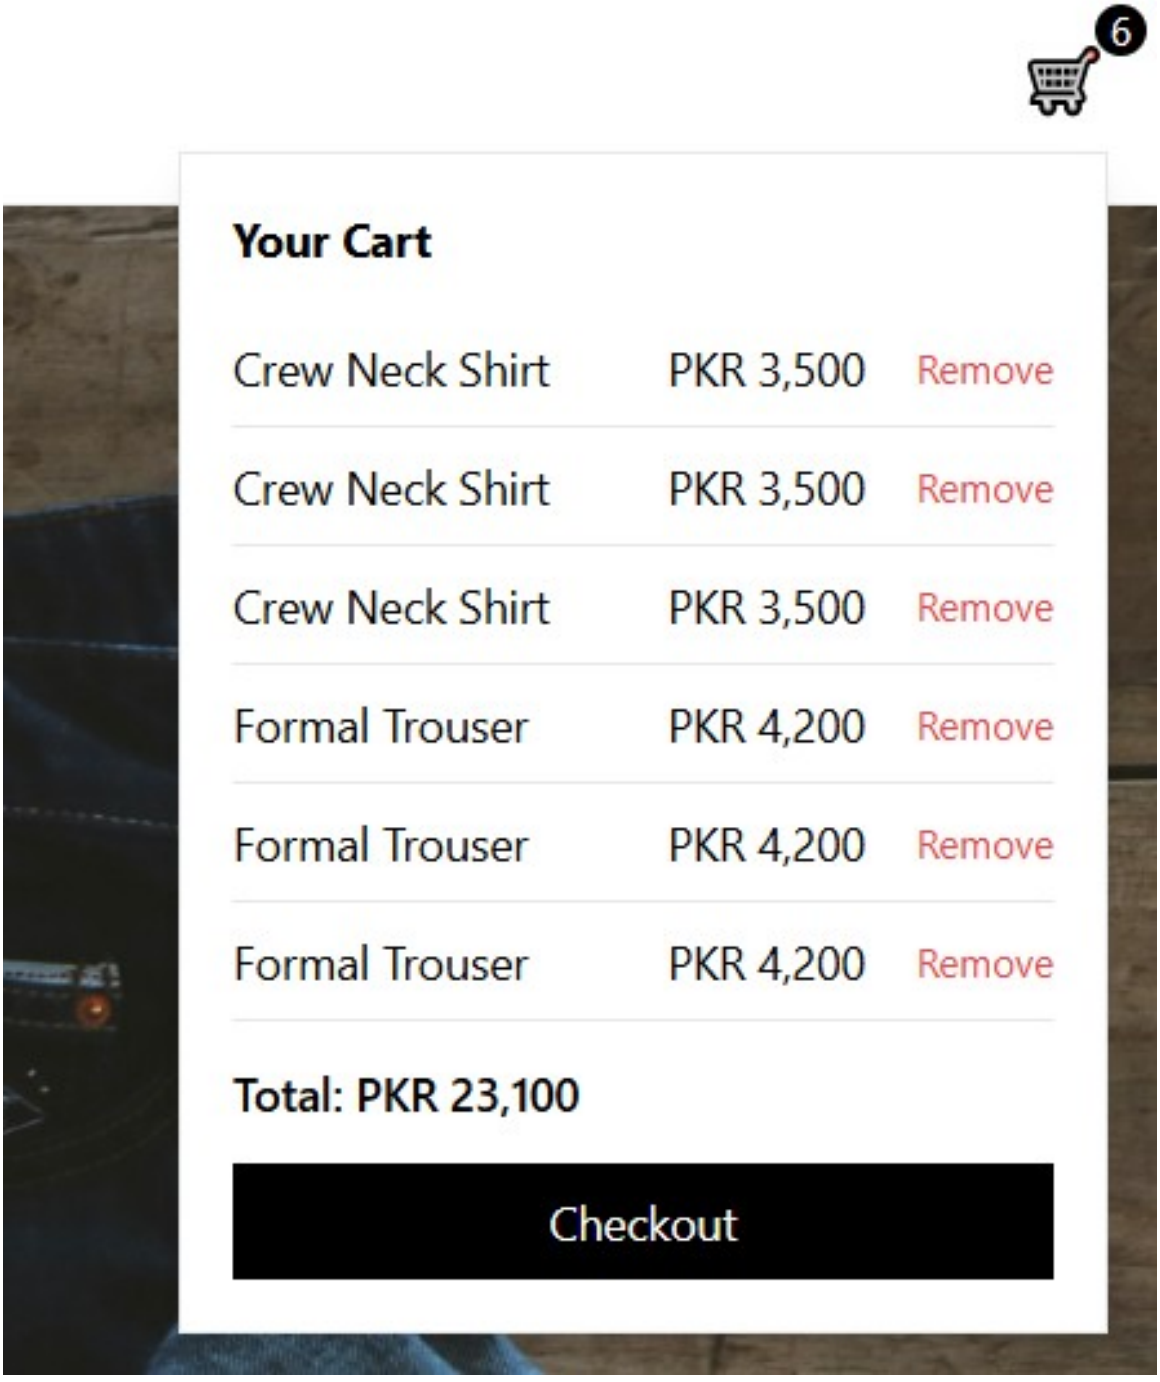

Add midterm/script.js and link it to the listing page. Plain JavaScript only (no jQuery, no framework).

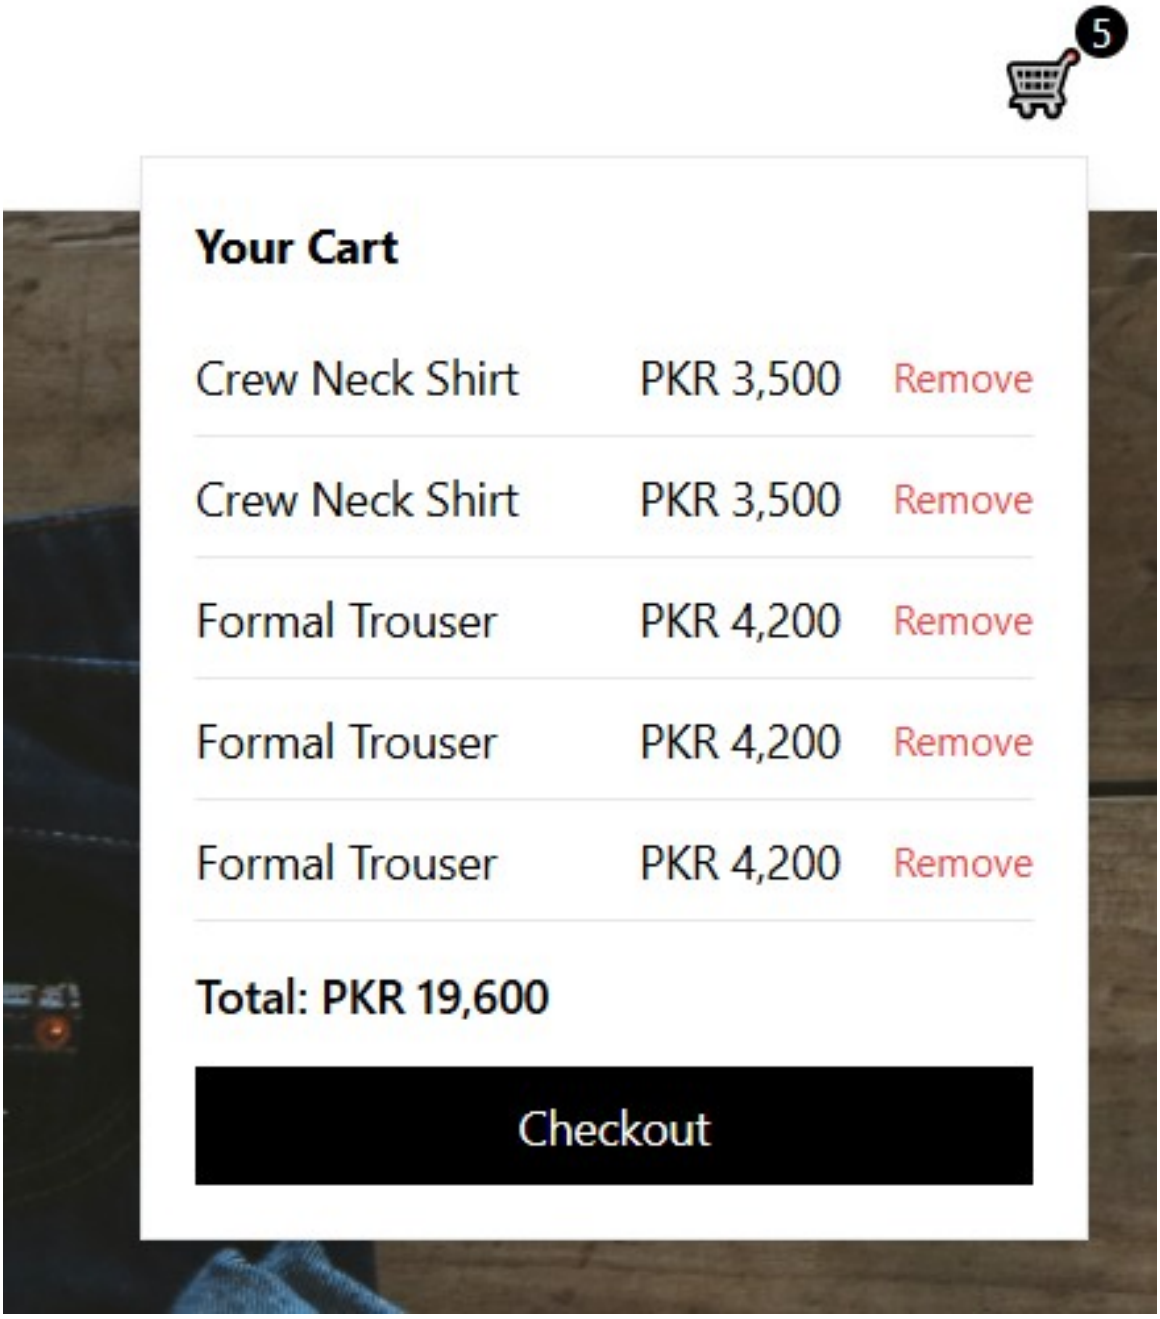

• Clicking "Add to Cart" on any card adds that product (name and price, read from the card itself) to an array, and the cart icon in the navbar shows a badge with the number of items in the cart.
• Clicking the cart icon opens a small mini-cart panel under it, listing each product with its price and a "Remove" button, and the total price calculated with reduce(). Removing an item updates the list, the total and the badge immediately. Clicking the cart icon again closes the panel.
• A product may be added at most (N mod 4) + 2 times; after that its button changes to "Limit reached" and is disabled until one of that product is removed.
